Description	A ring-shaped stamping with one opening on the circumference. The two ends at the opening are called lugs and flare slightly into the groove. When the lugs are released, contact is made with the grooved housing.	
Applications/ Advantages	The internal retaining ring design is for axial installation into machined grooves in housings and bores. The tapered section design assures uniform circular deformation, allowing for complete contact and tightness in groove. Steel rings can be safely used within a temperature range of -100°F to 500°F. Stainless steel rings are corrosion resistant & can be used in higher heat applications from -100°F to 900°F.	
Material	<i>Steel</i>	<i>Stainless</i>
	Carbon spring steel SAE 1060 - 1090	Precipitation Hardened Alloy 15% Chromium, 7% Nickel, 2% Molybdenum
Heat Treatment	Retaining rings are heat treated using the austempering method. Rings are uniformly heated to temperatures over 1500° F. They are then isothermally quenched in a molten salt bath at 600° F for 35 minutes. This results in parts with a bainite structure characterized by good mechanical properties.	
Hardness	<i>Sizes 25 & 31:</i> Rockwell 15N 86 - 88 <i>Sizes 37 - 51:</i> Rockwell 30N 69.5 - 73 <i>Sizes 56 - 77:</i> Rockwell 30N 67.5 - 72 <i>Sizes 81 - 102:</i> Rockwell 30N 66 - 71 <i>Sizes 106 - 347:</i> Rockwell C 47 - 52	<i>Sizes 25 & 31:</i> Rockwell 15N 82.5 - 86 <i>Sizes 37 - 102:</i> Rockwell 30N 63 - 69.5 <i>Sizes 106 & over:</i> Rockwell C 44 - 51
Tensile Strength	-	225,000 psi. minimum
Finish	See Appendix-A for information on the coating of retaining rings.
