Description	A thread forming screw having a tapered point, and a sharp crested, coarse pitch thread. Wood screws are produced two ways: Cut thread screws have a tapered shank; Rolled thread screws have a constant shank diameter, then taper at the point.				
Applications/ Advantages	Will Droduce a Halling thread when assembled thic wood of other				
Material	Carbon steel	18-8 Stainless			
Length of Thread	Rolled thread screws: At least four times the basic screw diameter o of nominal lengths too short to accomodate the minimum thread length	nread screws: Approximately two-thirds of the nominal length of the screw.  r times the basic screw diameter or two-thirds of the nominal screw length, whichever is greater. Screws modate the minimum thread length shall have threads extending as close to the underside of the head as practicable.			
Plating	See Appendix-A for plating information.	Stainless wood screws are usually supplied without additional finish.
